

■ API Requirements for Team Communication Project

1. Auth APIs

- POST /api/auth/register/user → Register a new user.
- POST /api/auth/login → Login with email/password, return JWT token.
- GET /api/auth/profile → Get logged-in user details (protected).

2. User Management APIs

- GET /api/users → Get all users.
- GET /api/users/:id → Get user by ID.
- PUT /api/users/:id → Update user details (profile, role).
- DELETE /api/users/:id → Delete user (Admin only).

3. Messaging APIs

- POST /api/messages → Send a message (requires senderId, receiverId, content).
- GET /api/messages/:userId → Get all messages between logged-in user and another user.
- DELETE /api/messages/:id → Delete a message (optional).

4. Group Chat APIs (optional but great for teams)

- POST /api/groups → Create a new group (name, members).
- GET /api/groups → List all groups of the user.
- GET /api/groups/:id/messages → Fetch group chat messages.
- POST /api/groups/:id/messages → Send message to group.
- PUT /api/groups/:id → Update group (add/remove members).
- DELETE /api/groups/:id → Delete group (Admin).

5. Notification APIs (if you need alerts)

- GET /api/notifications → Get user notifications.
- POST /api/notifications → Add a notification (new message, group invite).
- PUT /api/notifications/:id/read → Mark notification as read.

6. File Sharing APIs (optional, if you want to share docs/images)

- POST /api/files/upload → Upload a file (Multer + Cloud/Local).
- GET /api/files/:id → Download a file.
